CAREER OBJECTIVE

Final-year Computer Science student seeking a Software Development Internship. Skilled in Java, Spring Boot, SQL, React, and full-stack application development through academic projects, hackathons, and open-source contributions. Eager to contribute to real-world software engineering projects and continue learning in a professional environment.

EDUCATION

B.E. in Computer Science & Design Engineering

Sona College of Technology, Salem, Tamil Nadu

2023 – 2027

CGPA: 7.34 / 10

- Coursework: Object-Oriented Programming, Data Structures & Algorithms, DBMS, Web Technologies, Operating Systems, Computer Networks

Class XII — [Board Name]

Holy Angels' Girls Matric Hr Sec School, Tamil Nadu

2023

71.83%

Class X — [Board Name]

SRK Matric Hr Sec School, Tamil Nadu

2021

100%

TECHNICAL SKILLS

Languages: Java (Core Java, OOP, Collections, Exception Handling), JavaScript (ES6+), Python, TypeScript
Frontend: HTML5, CSS3 (Flexbox, Grid, Responsive Design), React.js (Hooks, Redux, Context API), Tailwind CSS

Backend: Spring Boot, Spring MVC, REST APIs, Node.js, Express.js, Flask, JWT Authentication

Databases: SQL (MySQL / PostgreSQL — Joins, Aggregates, Normalization, Indexing), MongoDB

Tools & Platforms: Git, GitHub, Postman, GitHub Actions (CI/CD), VS Code, IntelliJ IDEA

DSA: Arrays, Strings, HashMaps, Linked Lists, Stacks, Queues, Trees, Sorting, Binary Search, Recursion

Concepts: OOP (Encapsulation, Inheritance, Polymorphism, Abstraction), SDLC, Agile/Scrum basics

PROJECTS

WhaleShield — Real-Time Ship Strike Prevention Platform

Self-Initiated

Java 21, Spring Boot 3.4, React 19, PostgreSQL, PostGIS, WebSockets, Leaflet.js, HTML5, CSS3, Tailwind CSS, REST APIs • [GitHub](#)

- Built a full-stack application using Java Spring Boot 3.4 REST APIs (backend) and React 19 with HTML/CSS/Tailwind (frontend), demonstrating end-to-end Java Full Stack ownership
- Designed relational PostgreSQL schema with PostGIS extension for geospatial queries; applied normalization, indexing, and proximity-based SQL queries to detect whale-vessel collision risk
- Implemented real-time WebSocket pipeline from Spring Boot backend to React frontend, streaming live vessel position updates — demonstrating Java backend concurrency and event-driven design
- Applied OOP design principles in Java: modular service layers, entity classes, DTO patterns, and Repository interfaces following Spring Boot best practices

Luna — AI Mental Health Chatbot

Techathon Finalist

React.js, Redux, Flask, Python, MongoDB, REST APIs, JWT, Google Gemini API, TextBlob, Recharts • [GitHub](#)

- Designed a full-stack application with clean separation across React frontend, Flask backend, and MongoDB database — applying layered architecture and REST API design principles
- Implemented JWT-based authentication and session management with MongoDB schema supporting persistent chat history, user profiles, and data normalization
- Integrated TextBlob sentiment analysis for automated low-mood detection, triggering therapeutic exercises and external API calls — demonstrating backend logic and algorithm application

- Delivered responsive, accessible UI using HTML5, CSS3, React Hooks, and Redux; includes Recharts dashboard visualising emotional trends

CredVerify — Decentralized Credential Verifier

RIFT 2026 Hackathon Pre-Finalist

React, Node.js, REST APIs, Python, Algorand, IPFS, Pinata, AlgoKit • [GitHub](#)

- Built a full-stack blockchain credentialing platform with React frontend and Node.js REST API backend; reduced credential verification time from days to under 5 seconds
- Applied RESTful API design and JWT-style authentication structuring clean request/response architecture between frontend and backend
- Integrated IPFS via Pinata for decentralised certificate storage — each upload generates a cryptographic CID hash stored on-chain, making document tampering mathematically detectable
- Deployed smart contract on Algorand blockchain (App ID: 755802996) handling full credential lifecycle: issuance, student transfer, and on-chain revocation — demonstrating backend ownership from logic to deployment

OPEN SOURCE EXPERIENCE

Open Source Contributor — DevDunia

Oct 2025

React.js, Git, REST APIs

- Built and merged a production-ready Timezone Converter supporting 14+ timezones using React.js with clean component architecture and real-world API integration
- Followed standard Git workflows (branching, pull requests, code review) — directly applicable to Agile team environments at Cognizant

Open Source Contributor — GirlScript Summer of Code

Aug 2025

React.js, Redux, Git

- Merged 2+ pull requests building responsive React UI components with hooks-based state management and resolving production bugs
- Practised iterative code review, PR descriptions, and branch management — aligned with enterprise development practices

ACHIEVEMENTS

- 2nd Prize — National-level App Development Contest (Appathon): built and shipped a full-stack app end-to-end under competitive conditions
- Pre-Finalist — RIFT 2026 Hackathon with CredVerify, a Web3 credentialing platform selected among top teams nationally
- Finalist — Techathon with Luna AI Mental Health Chatbot
- 2nd Prize — Intra-department UI/UX & Game Design Competition
- Joint Secretary, The English Club — leadership, stakeholder communication, and team coordination

CERTIFICATIONS

- Infosys Python Foundation Certification
- Infosys AI Foundation Certification
- NPTEL Design Thinking Certification
- Data Processing and Visualization — NASSCOM Future Skills Prime
- Digital 101 Certification
